

Name: Mohammad (Arman) Golrokhian

Affiliation: Graduate Student (Master of Science in sustainability and Master of Public Policy)

Expected Graduation: 05/01/2017

Field of Study: Sustainable Energy Systems

I pursued two Master's degrees at the University of Michigan with a primary focus on sustainable energy systems. I took courses with a technical focus such as electricity and the grid, renewable energies, and energy markets. I also took courses with a policy focus such as program evaluations, energy policy and politics, and environmental policy. In addition, I studied mechanical engineering in my undergraduate studies. I would like to put all of my studies into practice in my future career and learn more from the professionals who work in these fields. The 2017 IEPEC is an ideal place for me to do so.

I recently graduated from the University of Michigan. I am looking for career opportunities in the power and utility sector, renewable energy, and energy consulting space. I was previously exposed to the IEPEC conference and its successful reputation in bringing professionals from these sectors together. I am certain that attending the 2017 IEPEC conference will provide me the opportunity to network with professionals in these circles, learn about the cutting-edge issues in these fields, and prepare for an ideal job that is perfectly aligned with my interests.
