

**Name:** Caglar Varcin

**Affiliation:** University of Wisconsin - Madison

**Expected Graduation:** Master's Student (M.A.) , Expected: June 16 2017

**Field of Study:** Energy Economics

I am an environmental engineer and am currently a graduate student at the University of Wisconsin – Madison in the Department of Agricultural and Applied Economics, focusing on Resource and Energy Demand Analysis (REDA). This program is tailored for students seeking careers as energy analysts. I have received specialized training in data management and analysis relevant to the energy industry.

I evaluated Opower Home Energy Report program and Rhode Island energy efficiency program and am currently evaluating the commercial demand response program of Consolidated Edison Company of New York. I want to learn more about 'non-traditional' energy efficiency programs and share my findings with other professionals. I haven't evaluated these programs in terms of their cost effectiveness and want to learn more about the cost effectiveness of energy efficiency programs. My research experience, academic background and strong interest in energy sector make me a great candidate for this conference.
