

Name: Angineh Zohrabian

Affiliation: University of Southern California

Expected Graduation: 2020, PhD

Field of Study: Environmental Engineering

My research is about pathways to integrate more renewable energy; particularly, using distributed energy resources and demand response programs to improve the grid flexibility under high penetration of renewable energy.

I am interested to expand my knowledge in the area of flexible energy resources and demand management as mechanisms to improve the power system operation. I believe that the topics of this conference will provide valuable insights around the practical methodologies, end-use data systems, challenges and energy options evaluation.
